

# BLOOD LAB CARD

The agglutination of your blood caused by Cold Agglutinin Disease makes it extremely important that your blood sample stays warm (37°C or 98.6°F). You can give this card to your lab technician or healthcare team when you are having blood drawn.

## BLOOD LAB CARD

- I have Cold Agglutinin Disease (CAD), a rare form of autoimmune hemolytic anemia (AIHA).
- This means my blood sample can agglutinate and be unusable at temperatures lower than 37°C or 98.6°F. Please keep my blood sample warm (37°C or 98.6°F) until it is ready to be tested.

**PLEASE DO NOT REFRIGERATE THIS BLOOD.**
